Product Requirements Document (PRD): Maa Sakhi v1.0

1. Executive Summary

Maa Sakhi aims to reduce maternal and infant mortality in underserved Indian communities by providing a "trusted voice" that delivers culturally sensitive, AI-driven health support.

2. Target Audience

- **Primary:** Pregnant women and new mothers (0–2 years) in rural and urban slum areas.
- **Secondary:** ASHA/Anganwadi workers, husbands, and immediate family members.

3. Functional Requirements

3.1 Voice-First Conversational Interface

- **Requirement:** Users must be able to ask questions via voice and receive audio responses in regional languages.
- **Rationale:** Low literacy and a preference for "ASHA-style" verbal counselling.

3.2 Triage and Danger Sign Detection

- **Requirement:** AI must identify "danger signs" (e.g., bleeding, fever) and provide immediate escalation advice.
- **Constraint: No diagnosis or prescription.** The system must strictly provide education and triage only.

3.3 Personalized Weekly Nudges

- **Requirement:** Automated outbound calls/messages delivering stage-specific nutrition and health tips.

3.4 Family Education Mode

- **Requirement:** Content specifically designed for husbands and elders to reduce "myth-based" decision-making and build support.

3.5 ASHA Worker Portal

- **Requirement:** A dashboard or tool for ASHA workers to track high-risk flags in their assigned area and access clinical references.

4. Non-Functional Requirements

- **Device Compatibility:** Must work on low-end smartphones and low-network areas.
- **Trust & Validation:** All AI-generated content must be validated against government-backed medical protocols.
- **Multilingual Support:** Initial rollout in Hindi and major regional dialects to overcome language barriers.

5. Success Criteria (KPIs)

- **Adoption:** Number of registered mothers and ASHA worker deployments.
- **Safety:** 100% of detected "danger signs" result in a recommendation for medical intervention.
- **Retention:** Weekly active listener rate (ensuring the "companion" aspect is maintained).

6. Future Roadmap

- **v1.1:** Integration with government health IDs (U-WIN/PMSMA).
- **v1.2:** Teleconsultation features for high-risk cases.
- **v1.3:** Premium localized diet and exercise subscription plans.
